Gabor Media Portal with Modula4: User description (english)
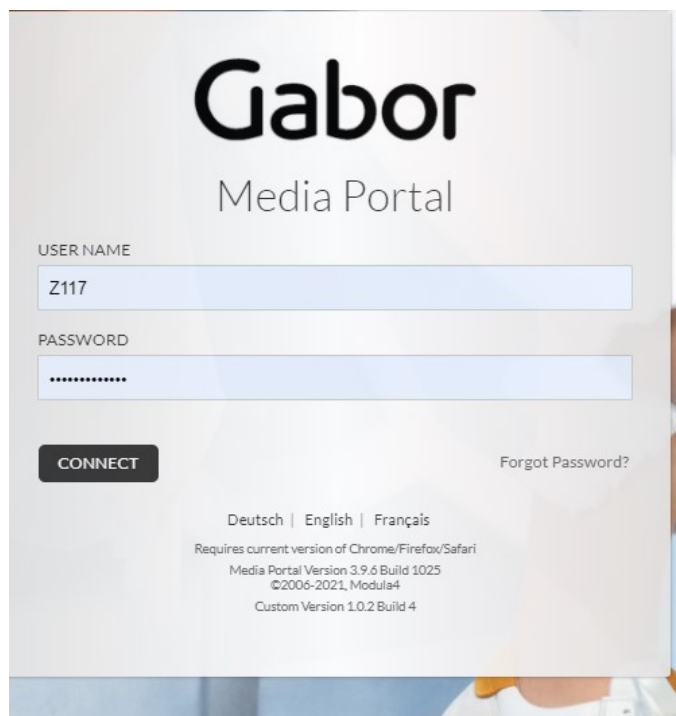

The Gabor-Mediaportal is a display program for image data and media from Gabor Shoes AG and it enables a download of e.g. product images for an online advertising shop.

The Gabor Media Portal Login is accessed via an Internet browser with "https://media.gabor.de/" and is then forwarded to Modula4. The login takes place with a user ID and password, external users get their password through the Gabor sales department.

On the side of the catalog selection you come to the product area shoes, you simply click on the selection tile next to the picture. A preview of the hits appears in the middle display. On the left below there are several offers of fixed selections with which the displayed article images can be narrowed down. (remove the selection with the minus symbol or at the top in the header) The more you have selected, the faster the response time.

It is advisable to specify the desired type of image, perspective: specify the reference image and season.

At the top right in the header you also have a full text search line, e.g. to search for article number / model. (There are also advanced search options here)

Attention, you should turn on the reference image: There are many individual photos for each article in different perspectives and the animated circular GIF image. If you switch on the filter reference image = "J" right at the beginning, you will only see each article once with the main photo.

If there is a malfunction and no picture can be seen, the display can be updated with the F5 key

Form division

Gabor

Areas:
1. Register, search result (standard)
2. Login / logout setting
3. Collection functions for all results 7
4. Catalog selection (products)
5. Side filters via metadata
6. Scroll / free text search
7. Result Preview of the images
   Image single image functions

1. Register in the header

The search result shows the number of hits in the status line and the small preview images for each screen size in the middle part

With the Collection tab, the existing collections (image collections) are listed according to 3 areas,

- Private collections   to be seen by and for users
- Public collections   from Headquarters for everyone to see
- Collections sent   to be seen by users for external parties See sect 11-13

Search Result	Collection: Gabor W22 ankle boots (203)	Basket (0)

Found 203 Items on 7 Pages

ⓘ Referenzbilder HW 2021

Sent Collections:

71.600.20

Nappa Jamaika
schwarz(El.Jersey)

71.600.27

Foulardcalf
schwarz

If you click on it, the results appear as a preview in the middle.

Mass functions for the collection:
- Download, to save the image files
- Add to basket
- New, to create an empty collection
- Save as to copy the collection
- Collection link
- Send
- Shut down
- Remove the collection
- Print

With the basket tab, the images previously collected by the user are displayed in the middle. The shopping cart is often used to memorize certain articles and perspectives and then to save them together via download
The basket is automatically emptied each time you log out.

Mass functions for basket:
- Download, to save the image files
- Add to collection
- Download link
- Send files
- Removing the entries in the basket
- To print

On the left you can assign the download resolution and file type for a later download to all objects in the basket.

2. Login / logout setting

In addition to the name, settings can be saved: sorting, sorting direction, lines: automatically by window or fixed number of lines, frame size / width, dependent data records and language.

3. Collection functions for all results

Add download to collection, add to cart, remove, print

4. Catalog selection

Depending on the authorizations, several catalogs are offered here from which you can narrow down your search. You can also search for several catalogs at the same time.

Catalogs are separate data areas for the image files. The normal standard catalog for shoe images is "Products"

5. Filter from metadata

Depending on the results that have already been filtered, you can select further possible search terms here below one another. You can see the possible values for selection under the search terms. With the minus symbol you can delete the filter:
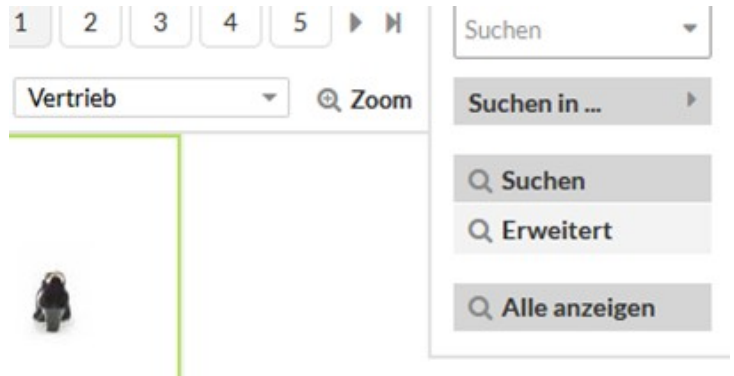

Filter options:
- Reference image
- perspective
- sales season,
- Type of shoe, color, brand
- Coll-adjusted, customer variant, sales-free, sales-blocked
- product property,
- brochures,
- Shoe type

6. Scroll / zoom Search using full text search

The normal page and arrow keys allow you to scroll through the displayed search results.
The zoom button enables the user to change the size of the preview images displayed.

With the full text search you can narrow down the "Search in" to get to the result faster.
The extended search logically enables further functions with and / or terms.

7. Display search results with preview

After the search has been carried out, the results are always displayed as a preview in the middle area. The number of hits per page changes depending on the setting and screen size.
When you move the cursor over an image, the individual functions appear as icon symbols:

8. ndividual functions for each image object

- add to collection,
- Add to cart
- download,
- Print single image via PDF
- Preview (also by clicking) then a larger picture appears and the description fields (metadata) next to it, see point 10.

New: Link, a URL appears that can be copied and given to a business partner via email.

The external business partner can then call up the screen from the outside for a specified period of time.

9. The single info preview shows the selected image

The picture is displayed in medium size.
You can see a scroll bar from the search results below
You can scroll to the right or left to other images, using the arrow symbol or the keyboard.

The assigned description fields (metadata) are to the right of the picture under Details

Functions via symbols:
- Add to collection
- Add to cart
- Download image file
- To link
- To print

10. Full view

If you click on the picture of the preview a full view appears over the whole screen with maximum size.
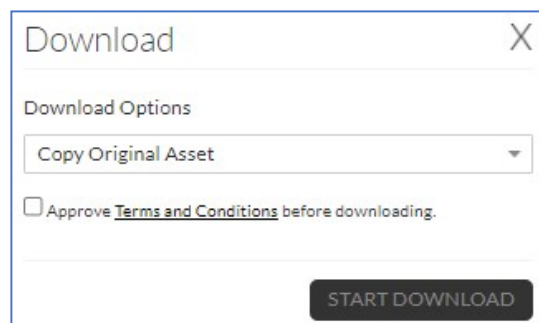

Scrolling using the keyboard also works here, you just can't see the scroll bar.

11. Download

Terms of use are to be accepted here.
Select the file type and resolution in the download option
(example JPEG 1000 px)

11. Add collection

You can add images to a collection when adding
images, or you can create a new collection.

When attaching, you need a name that states the
theme of the collection and a textual description of
the content.

ATTENTION: please never switch on PUBLIC. If you
want to share the collection with other people, then
link or send it.
If a public collection is accidentally created, IT will
immediately reset it to private.

12. Collection link

The function is often used internally.
If a collection link is used, please give name and
description, valid from to and usage rights.

Collection Link   X

13. Send collection

The function is often used externally. If a collection is to be sent by
email immediately, email addresses and a text are stored in addition
to the name of the collection.

Also here valid from to and indicate usage rights. When it is sent, an
email is sent to the addresses, which can then see this part
(collection) of the images for a limited time when they are opened.
